

## TROUBLESHOOTING GUIDE:

# Loud noise from speakers won't stop

[KB Home](#) > [User Troubleshooting](#) > Loud noise from speakers won't stop

---

If the user describes a **loud, continuous noise that sounds like "static", "white noise" or "wind"**, that means that the audio amp has blown. Send a co-pilot to the room immediately 🚨

*(typically, we cannot hear the noise over the intercom, because it's outside the audio frequency band of the intercom)*

## A temporary fix, while they're waiting for the co-pilot to arrive

The user can eliminate the noise themselves—temporarily—if they **unplug the Teaching Station from its power outlet**. BUT they will lose the intercom connection as well – and their projected image.
