

# Tech2U PC Station

## Setup & Strike, Troubleshooting Tips

**OVERVIEW:** The Tech2U mobile PC station is an ergonomic PC/Mac workstation that includes an annotatable touch screen, web camera, and microphone. These stations are typically delivered to classrooms that do not have a room PC.

### ✓ Setting up the Tech2U PC

- 1) Plug the white extension cord from the Tech2U PC into the wall outlet.
- 2) Plug the HDMI cord from the teaching station to the HDMI output found on the Mac Mini.
- 3) In some cases, you may have to connect to internet via an ethernet cable (part of the cable bundle on the teaching station) or connect through wifi.
- 4) Turn the Tech2U PC on.
- 5) Select the correct source on the teaching station touch screen.
- 6) Send to the display or to all displays (depending on number of screens).

✓ **Striking the Tech2U PC:** Reverse the above-listed steps and be sure to shut the computer down, unplug all the cords, and return to the equipment to your designated co-pilot.

### ✓ Troubleshooting with the Tech2U PC station

**Basics:** Is the PC turned on? Is the display screen turned on? Is the wireless keyboard and mouse turned on?

**Signal Flow:** Is the right HDMI source selected on the black Crestron panel (Teaching docks, junior stations) or Crestron touchscreen (full teaching stations)?

**Connection Issues:** Are the proper login credentials used for wifi connectivity? Or is the ethernet cable connected?

**Need help? Connect with your designated co-pilot.**
