

Yamaha Station

Setup & Strike, Troubleshooting Tips

OVERVIEW: The Yamaha CS 700 AV Video Sound Collaboration System is an all-in-one video conferencing system that features a sound bar with built-in speakers, microphone, and a wide-angle camera. It integrates with various streaming apps, including Zoom.

✓ Setting up the Yamaha Station

- 1) Attach and assemble the Yamaha bar with the stand.
- 2) Plug in the USB connection from the Yamaha to the computer (i.e., PC, instructor's device).
- 3) Plug in the power adapter into the wall outlet.
- 4) Give it a few seconds to warm up and you will hear a chime.
- 5) Connect with the instructor on how they want the camera placed (i.e., facing instructor or facing students) and audio setup (i.e., Yamaha as a speaker source? Play speakers in the room? Switch between podium mic and Yamaha mic?)
- 6) If using a streaming app, configure audio and video settings to pick up video and/or audio from the Yamaha station, as desired by the instructor.

✓ **Striking the Yamaha Station:** Reverse the above-listed steps and place the disassembled Yamaha station into a case provided by your designated co-pilot, and return it to them.

✓ Troubleshooting with the Yamaha station

Basics: Be sure to let the Yamaha station to warm up and load (could take up to 1 minute)

Signal Flow: Is the USB plugged into the right computer? Is the right source selected on the streaming app?

Volume control: Is the volume of the Yamaha muted on the video or audio?

Streaming App: Not Zoom? Look for camera and mic icons.

Need help? Connect with your designated co-pilot.
